PROFILE SUMMARY

Full-Stack Developer and ECE enthusiast specializing in designing, testing, and deploying scalable RESTful, scalable, and highly responsive APIs. Experienced in building multi-tenant AI systems using Node.js, React, and MySQL. Strong foundation in Data Structures and Algorithms with an expanding focus on Next.js for high-performance backend architecture.

EDUCATION

B.Tech in Electronics and Communication Engineering 2023 – 2027
Chandigarh Group of Colleges, Jhanjeri
CGPA: 7.53

Secondary School Education 2022
SKD Academy, Lucknow, Uttar Pradesh
Percentage: 78%

Higher School Education (Class X) 2020
SKD Academy, Lucknow, Uttar Pradesh
Percentage: 69.8%

PROJECTS

UniFlow ERP – Multi-Branch University Management System

- Developed a multi-tenant ERP supporting independent administration for university departments with localized HOD Super-Admin controls and data isolation.
- Engineered an RBAC system with a **User Approval Workflow**, requiring HOD verification for student registrations to ensure secure portal access.
- Implemented a **System Integrity Module** to audit syllabus completion and prerequisite mapping, providing real-time strategic analytics for department heads.
- Optimized API response times by implementing a **Redis-based caching layer**, reducing database load for frequently accessed student attendance records.
- Built a **real-time Attendance Engine** and BatchID-based Classroom Gatekeeper using Prisma ORM to automate lecture-wise participation tracking.
- Conducted comprehensive functional and manual testing across department portals to validate the RBAC system integrity
- **Tech Stack:** React, TypeScript, Tailwind CSS, Node.js, Express.js, Prisma ORM, MySQL

Stock Fraud Detector – Full-Stack Application

- Developed an AI-powered fraud detection platform to identify pump-and-dump schemes and detect manipulated trading screenshots using machine learning and computer vision techniques.
- Built a real-time stock analysis engine leveraging price spike detection, volume analysis, and Isolation Forest algorithm to generate risk scores (0–100).
- Implemented image fraud detection using OpenCV and PIL to identify tampered trading screenshots and fake chart patterns.
- **Tech Stack:** Python, OpenCV, PIL, Scikit-learn, React, Node.js, Express.js, MongoDB

TECHNICAL SKILLS

- **Languages:** Python, Java, TypeScript, JavaScript, SQL, Go (Learning)
- **Core CS:** Data Structures and Algorithms, OOPs
- **Web Technologies:** Node.js, Python, React.js, Tailwind CSS
- **Databases/Frameworks:** MySQL, Prisma, MongoDB
- **DevOps/Infra:** Postman, Git, GitHub, Docker(Basic), Linux CLI, AWS Basic
- **Testing/Tools:** Postman (API Testing), Git, Manual Testing, Functional Testing.
- **Soft Skills:** Problem Solving, Analytical Thinking, Team Collaboration, Communication

EXPERIENCE

VLSI Intern — INTRAINZ

- Learned fundamentals of ASIC design flow and RTL design.
- Worked on Verilog HDL modules and simulations.
- Gained exposure to hardware design and verification.

ACHIEVEMENTS & PARTICIPATION

- Participated in National Level Hackathons and Coding Competitions

CERTIFICATIONS

- **VLSI Internship Certification — INTRAINZ **
